Linux Mint 18

Impresora

cambiar permisos de servidor de impresión:
http://unix.stackexchange.com/questions/21074/dont-require-root-to-add-printers

sacar a un usuario de la pantalla de logon

1. `sudo vim /usr/share/mdm/defaults.conf`
2. buscar `Exclude` y cambiar `nobody` por la lista de usuarios que no se quiere que aparezca

o

1. ajusta el UID del usuario(s) que no queremos que aparezcan por debajo del «habitual» (1000)
2. `sudo vim /usr/share/mdm/defaults.conf`
3. buscar `MinimalUID=1000` y cambiar por el UID a nuestra conveniencia

system policy prevents modification of network settings for all users

un usuario no-admin no puede conectarse a nuevas redes WIFI, pide permisos de admin (sudo) para añadir la nueva red.

http://askubuntu.com/questions/244567/remove-sudo-password-when-connecting-to-new-wifi-network

/etc/polkit-1/localauthority/50-local.d/10-network-manager.pkla

```
[Let user pupil modify system settings for network]
Identity=unix-user:<user>
Action=org.freedesktop.NetworkManager.settings.modify.system
ResultAny=no
ResultInactive=no
ResultActive=yes
```

otra posible solución, que dicen funciona en Ubuntu 14.04 LTS & 16.04 LTS:

1. `su -`
2. `nano /usr/share/polkit-1/actions/org.freedesktop.NetworkManager.policy`
3. Towards the end of the file, find the section labeled:`<action id=«org.freedesktop.NetworkManager.settings.modify.system»>`
4. At the the bottom of the org.freedesktop.NetworkManager.settings.modify.system Section, locate the following line of code: `<allow_active>auth_admin_keep</allow_active>`
5. Change this line to read as follows: `<allow_active>yes</allow_active>`
6. Restart
